## University of Iowa VSC Testing Results

Contract Number 17855700 (BR01) with Dentist Select

Volatile Sulfur Compounds (VSCs) are toxic and cause bad breath and oral diseases.

OraCare, but none of the other oral rinses, removes significantly more VSCs produced by *P. gingivalis* than does water. When normalized to water (below), OraCare removes 100% of the remaining VSCs produced by *P. gingivalis*. Only OraCare was statistically different than the water rinse control.

This study was completed by the University of Iowa College of Dentistry in August of 2012 by Professor Jeffrey Banas.
